

Past Work Library — Project Brief for Abigail & Jose

From: Daniel **Date:** 2026-05-12

What we're building

We're adding a new "Sample of Our Work" page to every proposal — a 6-tile photo grid showing past projects we've installed. I need a curated library of past work I can pull from when building each proposal.

What I need from you two

Two things, dropped into a single folder I can hand off:

1. **Past Work List.xlsx** — a spreadsheet with one row per past project (template below).
2. **Photos/** — a folder of JPGs, one per project listed in the spreadsheet.

Where to do the work: build this folder on your Desktop, OneDrive, or any shared drive — wherever you normally work. You don't have access to the proposal builder repo and you don't need it. I'll convert the spreadsheet + photos into the format the proposal builder expects on my end. You don't touch any code, ever.

Just hand me the folder when it's ready.

The spreadsheet

Four columns. One row per project. Header row exactly as below:

Project Name	Location	Year	Photo Filename
Pier 39	San Francisco, CA	2023	pier39_evening.jpg
Oregon Zoo	Portland, OR	2024	zoolights_walkway.jpg
The Music Center	Los Angeles, CA	2024	musiccenter_plaza.jpg

Notes per column: - **Project Name:** the customer-facing name we'd put on the slide. Use the property name, not the legal entity. ("Pier 39" not "Pier 39 Limited Partnership".) - **Location:** "City, ST" — two-letter state code. - **Year:** the year we installed it. Just the 4-digit number. - **Photo Filename:** the exact filename of the JPG in the **Photos/** folder. Must match character-for-character including the **.jpg** extension. Whatever the photo is named on your end, type that here.

If a project doesn't have a usable photo, leave it off the list. No empty photo cells.

The **Photos/** folder

A flat folder — no subfolders. One JPG per project listed in the spreadsheet.

- **Format:** JPG only (not PNG, not HEIC, not RAW).
- **Size:** roughly 1200×800 pixels or larger. Landscape orientation is best (matches the tile shape on the slide).
- **Quality:** sharp, well-lit evening shot. No people in foreground if avoidable. No watermarks or logos burned in.
- **Filename:** anything you want — just make sure the spreadsheet's "Photo Filename" column matches exactly.

If you have multiple photos for a project, pick one. We can swap it later.

Rules — read these carefully

1. **Past work only.** Only projects we've already installed in a prior season. If we're currently pitching the client this season, they don't go in here yet. Reason: this slide is social proof, and putting an active deal on it reads as inflated track record.
2. **Real customers only.** Every entry must be a real project we actually installed. No fictional names, no aspirational targets, no stand-ins.
3. **One photo per entry.** Don't include alternate shots in the folder — just the one we'd want on the proposal.

How many to start with

Aim for **12–20** strong entries. Each proposal uses 6, and I want enough range to pick relevant ones per prospect (civic, hospitality, destination retail, corporate campuses, etc.). Start with our strongest installs of the last 3–5 seasons.

Quick QA before handoff

Before you hand the folder over, double-check:

- ☐ Every row in the spreadsheet has all four columns filled in
- ☐ Every "Photo Filename" value exists as a real file in the **Photos/** folder
- ☐

Every JPG in the **Photos/** folder is referenced by some row in the spreadsheet (no orphan photos)

- ☐ All photos are JPGs (not PNGs, HEICs, or RAW files)
- ☐ No current-season prospects mixed in
- ☐ Top-level folder contains exactly one spreadsheet and one **Photos/** subfolder

Final handoff

Zip the whole folder or drop it on the shared drive and let me know. I'll handle the conversion and integration from there.

Questions — text me or grab me. Thanks both.
